

Fishing Waste to Energy

Reduce your fishing and aquaculture waste by up to **80%** and turn it into renewable energy

Revolutionize Your Waste

As an expert in delivering Waste-to-Energy solutions, Eco-Growth is committed to leaving a clean legacy. We partner with clients to create a world where all people can pursue opportunities without waste.

Fishing and Aquaculture are vital industries that provide a global food source. They also provide direct and indirect economic benefits to many local and regional economies. Unfortunately, waste management from this industry has been having a significant impact on the environment. Our innovative technology transforms raw, organic waste into a useable, significantly lighter, odour-free substance that can be used as a biofuel, reducing the costs associated with commercial disposal of organic waste. Designed to seamlessly integrate into any size fishing or aquaculture operation, our Eco-Growth Organic Reactor (EGOR™) is a cost-effective solution that enables your business to save money and the environment, at the same time.

Get the most out of your waste and contact us today.
